ITEC CARGO LTD

Logistics Management System

Stakeholder presentation guide and user guide

What is inside

- **Part A: Get ready.** What to check the day before, and which accounts to use.
- **Part B: The presentation.** A 45-minute running order, a click-by-click script for each act, the words to say, and the questions to expect.
- **Part C: User guide.** Every module of the system: what it is for, how to use it, and what it does automatically.
- **Part D: Benefits.** What the system gives each group of stakeholders.
- **Appendix.** The two example companies and every reference number you will open during the demo.

How to use this guide

Read Part A and Part B twice and rehearse the demo once, end to end, the day before. Part C is your reference when someone asks "can it do...?"

CONTENTS

What this guide covers

Part A · Get ready

A1 · The system in one page

A2 · The day-before checklist

A3 · Accounts and the role switcher

A4 · The story you will tell

Part B · The presentation

B1 · Running order (45 minutes)

B2 · Opening

B3 · Acts 1 to 9: the live demo

B4 · Closing

B5 · The five messages to repeat

B6 · Questions stakeholders ask

B7 · If something goes wrong

Part C · User guide

C1 · Signing in and finding your way

C2 · How every page works

C3 · Fleet management

C4 · Transport and customs

C5 · Commercial

C6 · Finance

C7 · Warehouse

C8 · Accounting

C9 · Reports

C10 · Administration

C11 · Roles: who sees what

C12 · Rules the system enforces

Part D · Benefits

D1 · Benefits by stakeholder

D2 · Before and after

D3 · What comes next

Appendix

The two example companies: every reference number

Glossary

PART A · GET READY

A1 · The system in one page

A transport company has five things going on at once: the fleet, the jobs, the warehouse, the money and the books. They usually live in five places: a WhatsApp group, a notebook, spreadsheets, a pile of receipts and the accountant's file. LMS puts all five in one system and **connects them**, so a fact is typed once and every other part of the business sees it.

Area	What it holds	Who uses it
Fleet	Vehicles, drivers, licences, insurance and inspections, services and repairs	Fleet Manager
Transport	Customer requests and quotes, trips, cargo (shipments), stops, deliveries, customs clearance at borders	Logistics Manager, Drivers
Commercial	Customers, agreed prices (rate cards), invoices, payments received	Finance, Logistics
Finance	Fuel bought, trip expenses and allowances, with approval	Finance, Drivers
Warehouse	Warehouses, stock, stock movements, purchases, suppliers, customer cargo held in store	Warehouse Manager
Accounting	Automatic double-entry books: journal, ledger, trial balance, profit and loss, balance sheet, cash flow, cheques, budget, currencies	Finance, Management
Control	Users, role permissions, settings, audit trail, notifications, 8 live reports	Admin, Management

Three things make it different from a spreadsheet:

- **It refuses costly mistakes.** It won't dispatch a truck that is already out, is in the garage, or is overloaded. It won't send a driver whose licence has expired, or put chilled cargo on a truck with no cooling unit.
- **It does the follow-on work itself.** One click on *Dispatch trip* marks the vehicle and driver as out, puts the cargo in transit, closes the request and notifies the driver.
- **It keeps the books without anyone typing a debit.** Invoices, payments, approved expenses, fuel and repairs post to the ledger automatically, in the right currency.

PART A · GET READY

A2 · The day-before checklist

Most demo failures come from preparation, not the software. Work through this list the day before and tick each line.

Do this first: bring the database up to date

The code has two newer database updates that your live database does not have yet: the **customs clearance workflow** and the **pre-dispatch document pack**. Without them, **Dispatch trip** and the customs clearance buttons can fail with a database error in front of your audience.
Fix: import **pre_demo_update.sql** (in the project folder) **once**, in phpMyAdmin, after taking a backup. It was tested on a copy of your database with the example data loaded.

#	Check	Why
1	**Back up the live database**: phpMyAdmin → database → Export → Go. Keep the file.	You can undo anything the rehearsal or the demo changes.
2	Import **sample_data_inserts.sql** if it is not loaded yet. Check that Customers shows Akagera Coffee Exporters and Virunga Cement Distributors.	The whole demo uses these two companies.
3	Import **pre_demo_update.sql once**.	Makes Dispatch and customs clearance work.
4	Sign in once with **every account** you plan to show (see A3) and set its password.	The staff accounts are set to *force a password change* at first sign-in. You don't want that screen during the demo.
5	As admin, open the **Role** menu (top right) and switch to each role and back.	This is how you will change role live without signing out.
6	Rehearse Acts 1 to 9 on a copy, or on live and then restore the backup from step 1.	Acts 4 to 6 change data: the clearance, delivery and payment. Rehearsing on live uses them up.
7	Decide about email. The outbox shows emails are **switched off / no API key**.	Either configure email (Settings + DEPLOY.md step 6) or don't promise live emails.
8	Browser: full screen (F11), zoom 110-125%, close other tabs, turn off notifications, light theme.	Readable from the back of the room.
9	Open these tabs in advance: Dashboard, Customs clearance BDR-2026-0002, Invoice INV-2026-0002, Accounting books.	Jump straight there if time is short.
10	Take screenshots of the key pages and put them in a folder.	Your backup if the internet fails.
11	Test the projector, sound and internet in the actual room. Have a phone hotspot ready.	The room is the most common failure point.

A3 · Accounts and the role switcher

Present from the **administrator account**. It is the only account that can use the **Role** switcher at the top right, which changes the whole screen to another role's view instantly. Stakeholders see exactly what a driver, a finance officer or a manager sees, and you never type a password in front of them.

Role	Person / login	Shows during the demo
Super Admin	ITEC ADMIN CARGO, nzizaoscar25@gmail.com	Everything: set-up, permissions, audit. **Present from this account.**
Logistics Manager	Aline Mukamana (aline@itec.rw) or IRADUKUNDA Elie	Requests, trips, shipments, customs clearance
Driver	Samuel Niyonzima (samuel@itec.rw), Claude Bizimana	Only their own trips, deliveries and fuel
Fleet Manager	Eric Murenzi (eric@itec.rw)	Vehicles, drivers, maintenance, documents
Warehouse Manager	Nadine Tuyisenge (nadine@itec.rw)	Stock, purchases, suppliers
Finance	Emmanuel Safari (emmanuel@itec.rw)	Invoices, payments, expenses, books
Management	Jean Pierre Habimana (jeanpierre@itec.rw)	Read-only: dashboard, reports, books, audit

Tip

When you switch role, the system signs you in as that role's account. To come back, open the **Role** menu again and pick **Super Admin**.

PART A · GET READY

A4 · The story you will tell

Stakeholders remember stories, not menus. The whole demo follows two real-looking jobs that ITEC Cargo ran this month for two client companies. One job is finished and paid; the other is on the road right now, and you finish it live in front of them.

	Job 1: finished	Job 2: live
Client	**Akagera Coffee Exporters Ltd** (CUS-2026-0001), contact Diane Uwase	**Virunga Cement Distributors Ltd** (CUS-2026-0002), contact Patrick Nshimiyimana
Cargo	300 bags of green coffee, 18,000 kg, worth RWF 156.6 million	500 bags of cement, 25,000 kg, worth USD 5,750
Route	Kigali → Rusumo border → Dar es Salaam port	Kigali → Rubavu depot → La Corniche border → Goma (DRC)
Truck and driver	RAD 482 K (Scania R450), Samuel Niyonzima	RAE 219 C (Mercedes Actros), Claude Bizimana
Price	Rate card: RWF 300 per kg → RWF 5,400,000 + VAT	Rate card: USD 0.09 per kg → USD 2,250 + VAT
Currency	Rwandan francs	US dollars (converted to RWF at the BNR rate of 1,450)
Where it is now	Delivered 13 Sep, invoice **paid in full** (RWF 6,372,000)	**At the border**, declaration lodged, invoice **part paid** (USD 1,000 of 2,655)
What you do live	Open it to show a job done properly from start to finish	Clear customs, deliver, complete the trip, record the balance: **the system at work**

Around these two jobs the system also holds the supporting records you will point to: two warehouses (Kigali Main, Rubavu depot), two suppliers (Kigali Truck Parts & Service, Great Lakes Clearing & Forwarding), a completed service and a scheduled tyre job, an insurance policy and an inspection certificate that is about to expire, engine oil in stock, tarpaulins below minimum, two cheques, the annual budget and the journal entries. The Appendix lists every reference number.

PART B · THE PRESENTATION

B1 · Running order (45 minutes)

Plan 30 minutes of demo inside a 45-minute slot. If you are given 30 minutes in total, do Acts 1, 2, 4, 5, 6 and 7 and skip the rest.

Time	Part	What happens	Role on screen
0:00	Opening	The problem, the promise, the story of the two clients	- (no screen, or dashboard)
0:05	Act 1	Dashboard: the whole company on one screen	Super Admin
0:08	Act 2	Customer, agreed price, request and automatic quote	Logistics Manager
0:12	Act 3	Trip, cargo, route, and the safety rules that refuse mistakes	Logistics Manager
0:16	Act 4	**Live: clear the cement truck through customs at Goma**	Logistics Manager
0:21	Act 5	The driver's view: deliver the cement, fuel in shillings	Driver → Logistics
0:25	Act 6	**Live: get paid.** Invoice, dollar payment, profit per trip	Finance
0:29	Act 7	The books that wrote themselves	Finance
0:32	Act 8	Fleet care and the warehouse	Fleet / Warehouse
0:35	Act 9	Control: permissions and the audit trail	Super Admin
0:37	Closing	Benefits, next phase, the ask	-
0:40	Q&A;	Use B6 for the answers	-

B2 · Opening (5 minutes)

Start without the system on screen, or with the dashboard frozen behind you. Your goal in these five minutes is for every stakeholder to recognise their own daily problem.

Say

“Today, a job at ITEC Cargo lives in five places: a WhatsApp group, a notebook, Excel, a pile of receipts and the accountant's file. When a client calls asking where their cargo is, somebody has to phone the driver. When the month ends, somebody spends a week retyping receipts into the books. And nobody can say quickly whether a particular trip made money.”

Say

“The Logistics Management System puts the whole company in one place and connects it. A fact is typed once, by the person who knows it, and everyone else sees it. Instead of showing you menus, I will show you two real jobs we ran this month: coffee to Dar es Salaam, and cement to Goma. The coffee job is finished and paid. The cement truck is at the Goma border right now, and we are going to finish that job together, live.”

PART B · THE PRESENTATION

B3 · The live demo, act by act

Each act gives you the **point to prove**, the **clicks**, what the audience will **see**, and what to **say**. Menu paths are written like **Transport → Trips** (sidebar group → page).

ACT 1 The whole company on one screen

3 min · Super Admin

Point to prove: Management can see the state of the business in ten seconds, without asking anyone.

1. Sign in as the administrator. The **Dashboard** opens.
2. Point to the **four cards**: total vehicles, active trips, pending requests, money spent this month. These are live counts, not decoration.
3. Point to the **charts** (fleet status, monthly spend, trips by status, activity). Click **View as table** on one to show the numbers behind it.
4. Point to **Recent trips and deliveries**: the cement trip TRP-2026-0002 is *In transit*.
5. Point to **Operational attention**: the inspection certificate for RAE 219 C expiring on 20 Oct, tarpaulins below minimum, the pending expense.
6. Click the **bell** to show notifications raised by events (for example, the payment received from Akagera).

Say

"Every morning the manager opens this page and sees what needs attention today: a certificate about to expire, stock running low, an expense waiting for approval. Nobody had to prepare this report; the system raised it."

ACT 2 From a customer's call to a price

4 min · Logistics Manager

Point to prove: Prices are agreed once and applied automatically; there's no guessing and no arguing about the quote.

1. Switch role to **Logistics Manager**. Open **Commercial → Customers → Akagera Coffee Exporters Ltd**. Show the contact, TIN, payment terms and credit limit, then the related **rate cards, invoices and trips** panels on the same page.
2. Open **Commercial → Rate cards → RATE-2026-0001**: Kigali → Dar es Salaam, RWF 300 per kg, minimum RWF 3,000,000. Point out that the Logistics Manager can *read* prices but only Finance can *change* them.
3. Open **Transport → Transport requests → REQ-2026-0001**: 18,000 kg coffee, quoted RWF 5,400,000, accepted by Diane Uwase, approved by Aline Mukamana, with the time recorded.
4. **Optional live step (1 minute):** click **New request**: customer Akagera, 12,000 kg, pickup Kigali, destination Dar es Salaam, rate card RATE-2026-0001, required date next week, and save. Then click **Quote the customer**. The system prices it at 12,000 × 300 = **RWF 3,600,000** on its own. Then click **Customer accepted**.

Say

"When a client calls, the dispatcher records the request, and the price comes from the contract we agreed with that client, not from memory. The system records who quoted, who accepted and who approved, and when."

ACT 3 Planning the trip, and the mistakes it refuses

4 min · Logistics Manager

Point to prove: The system protects the company from the expensive errors people make under pressure.

1. Open **Transport → Trips** → **TRP-2026-0001** (coffee). Show that the trip joins the **vehicle** RAD 482 K, the **driver** Samuel Niyonzima, the **request** and the **customer**, with planned and actual times.
2. Scroll to **Stops on this route** (Rusumo checkpoint) and **Shipments on board** (SHP-2026-0001, 300 bags, 18,000 kg).
3. Open **Transport → Shipments** → **SHP-2026-0001**: cargo type, weight, volume, declared value, special instructions (*keep dry, cover with tarpaulin*).
4. **Show a refusal live (recommended):** open the request you created in Act 2 and click **Plan trip** (or **Transport → Trips → Create trip**). Choose vehicle **RAE 219 C** and driver **Claude Bizimana**, save, then click **Dispatch trip**. The system refuses: *"That vehicle or driver is already out on trip TRP-2026-0002."* Then click **Cancel trip** and give a reason, to tidy up.

Then name the other refusals (you don't need to show them all):

- No vehicle or no driver assigned → *"Assign both a vehicle and a driver before dispatching."*
- Truck in the garage or inactive → refused.
- Driver's licence expired → *"The licence for … expired on …"*
- Load heavier than the truck's payload → *"The load is … kg but … carries … kg."*
- Chilled cargo on a truck with no cooling unit → refused.
- Cross-border shipment with its document pack not ready → *"… has not passed the final pre-dispatch check."*

Say

"These are the mistakes that cost us money: a truck promised to two clients, an overloaded axle fined at the weighbridge, a driver stopped with an expired licence. The system simply will not let them happen."

ACT 4 LIVE: clear the cement truck through customs at Goma

5 min · Logistics Manager

Point to prove: Cross-border work, the hardest part of the business, is tracked step by step, with every document, charge and decision on record.

Before you start

This act needs **pre_demo_update.sql** imported (checklist item 3). Rehearse it once. Each button only appears when the previous step is done.

1. Open **Transport → Customs clearance** → **BDR-2026-0002**. Show the border post (La Corniche / Goma), truck, driver, declaration number, seal number, weighbridge weight and the clearing agent (Great Lakes Clearing & Forwarding). Status: **Declaration submitted**.

2. Show the **documents** panel: the commercial invoice is still *pending*. Show the **charges**: escort fee USD 120 (RWF 174,000 in the books).
3. Click **Start review** → status *Under review*.
4. Click **Assess duties** → *Duties pending*. (Or show the inspection path: **Request inspection**, then **Add inspection** with result *Passed*, then **Inspection passed**.)
5. Click **Request payment** → *Payment pending*.
6. Click **Mark cleared** before fixing anything. The system refuses, because the commercial invoice document is not valid yet and the escort fee is not paid. **This refusal is the point: show it.**
7. Edit the commercial invoice document and set it to **valid**. In the **Border charges** table on the same page, set the escort fee's **Payment** column to **Paid** and save the charges. Click **Mark cleared** again → *Cleared*.
8. Click **Create release**, enter the release number and save. Then click **Mark released** → *Released*. The truck can now enter Goma.

Say

"At the border, today, we find out what is missing when the truck is already stuck. Here, every document and every charge is visible from Kigali, and the system will not mark a load cleared while a document or a payment is outstanding. Management can see exactly how long each border takes."

ACT 5 The driver's view: deliver the cement

4 min · Driver, then Logistics Manager

Point to prove: Drivers see only their own work, and completing a job updates the whole company automatically.

1. Switch role to **Driver**. You are now signed in as **Samuel Niyonzima**. Point out the **short sidebar**: trips, shipments, deliveries, fuel. There are no customers, prices or reports. Lists show the badge **Scoped to your own work**.
2. Open **Finance → Fuel management** → **FUE-2026-0001**: 400 litres bought at Nyakanazi, Tanzania, in **Tanzanian shillings** (TZS 1,180,000), converted automatically to **RWF 633,660**. The odometer updated the vehicle by itself.
3. Switch back to **Logistics Manager** (the cement job belongs to the other driver, so Samuel cannot see it: that is the point). Open **Transport → Deliveries** → **DEL-2026-0002** and click **Collected / delivered**. The delivery is stamped with the time and the person.
4. Open **Transport → Trips** → **TRP-2026-0002** and click **Mark delivered**. The message confirms the vehicle and driver are released, and says whether the job arrived on time against the plan.
5. Open **Fleet management → Vehicles** → **RAE 219 C**: its status went back to **Available**, and nobody typed it. The shipment is **Delivered** as well.

Tip

The trip was planned to arrive on 30 Sep at 14:00, so the message will say it arrived **late** against the plan. That is honest, and it's a good talking point: *"the system measures on-time performance against the plan, per driver and per month."* If you prefer, edit the planned arrival before the demo.

ACT 6 LIVE: get paid, in dollars, and see the profit

4 min · Finance

Point to prove: Billing is exact, multi-currency, and you know the profit of every trip.

1. Switch role to **Finance**. Open **Commercial → Invoices** → **INV-2026-0001** (coffee): lines, VAT 18% calculated, total RWF 6,372,000, status **Paid**, with the payment listed underneath.
2. Open **INV-2026-0002** (cement): USD 2,250 + VAT = **USD 2,655**, of which USD 1,000 has been paid, so the status is **Partially paid**. The same invoice shows **RWF 3,849,750** for the books at 1,450.
3. Click **Commercial → Payments received → Record payment**: against INV-2026-0002, amount **1655**, currency USD, method Bank transfer, today. Save.
4. Reopen INV-2026-0002. The status changed by itself to **Paid**, and the balance is **0**.
5. Open **Finance → Logistics expenses** → **EXP-2026-0002** (USD 60 DR Congo transit permit, *pending*) and click **Approve expense**. The approver and time are recorded.
6. Open **Reports → Trip profitability**, set the period to **1 Sep 2026 to today** and click **Run**. Each trip shows revenue (net of VAT), fuel, other costs and margin. Click **Export CSV**.

Say

"For the first time we can answer the owner's real question: which trips make money, and how much? Revenue is taken without VAT, because VAT belongs to RRA, and every cost the driver incurred on the road is counted against that trip."

ACT 7 The books that wrote themselves

3 min · Finance

Point to prove: Operations and accounting are the same data, with no double typing and no month-end catch-up.

1. Open **Accounting → Journal** and search **INV-2026-0001**. Open **JRN-2026-0001**: debit Accounts receivable 6,372,000, credit Freight revenue 5,400,000, credit VAT payable 972,000. **Balanced.** The source tile links back to the invoice.
2. Search **PAY-2026-0001**: debit Bank 6,372,000, credit Accounts receivable. Nobody typed these entries.
3. Open **Accounting → Accounting books**. The green bar says **The ledger balances**. Open **Trial balance**, then **Profit and loss**, then **Balance sheet**.
4. On any book, click **PDF** and **Excel**: a branded PDF and a real spreadsheet with numbers, ready for the auditor or the bank.

Say

"The accountant no longer builds the books from receipts at month end. Every invoice, payment, approved expense, fuel purchase and repair is already in the ledger, in double entry, and the trial balance agrees. The eight standard books export to PDF and Excel in one click."

ACT 8 Looking after the fleet and the warehouse

3 min · Fleet Manager, Warehouse Manager

Point to prove: Assets are protected: services happen on time, documents never lapse, stock never silently runs out.

1. Switch to **Fleet Manager**. Open **Fleet management → Vehicle documents**: SONARWA insurance *valid*; inspection CT-2026-RAE219C **expiring** with a countdown badge. The status is calculated from the date, not typed.
2. Open **Maintenance** → **MNT-2026-0001**: full service after the Dar es Salaam run, estimated RWF 1,300,000, actual **RWF 1,245,000**, calculated from its parts and labour lines. **MNT-2026-0002**: two front tyres scheduled for RAE 219 C.
3. Switch to **Warehouse Manager**. Open **Warehouse → Inventory**: engine oil *in stock* (16 drums); tarpaulins **Reorder** (3 against a minimum of 5), flagged automatically.
4. Open **Procurement → PR-2026-0002**: 10 tarpaulins, approved by Finance. The warehouse can raise a purchase but cannot approve its own spending. When goods arrive, **Mark received** puts them into stock automatically.
5. Open **Warehouses → ITEC Kigali Main Warehouse** to show the customer cargo held on site: the 300 coffee bags received on 9 Sep and loaded on 10 Sep.

ACT 9 Control and trust

2 min · Super Admin

Point to prove: Everyone sees only what their job needs, and every action is traceable.

1. Switch back to **Super Admin**. Open **Administration → Role permissions**. Show the **Driver** tab (very few ticks) and the **Finance** tab. Explain view / create / edit / delete / approve per page, and that a change takes effect immediately.
2. Open **Administration → Audit trail**. Search **TRP-2026-0002** or **BDR-2026-0002**: every step you just did in the demo is listed with who and when, including the reasons for any cancellation.

Say

"Nothing is really deleted. A deleted record disappears from the lists but stays in the audit trail with the reason, and journal entries are reversed, never erased. That is what makes the numbers trustworthy for the owners, the bank and the auditor."

PART B · THE PRESENTATION

B4 · Closing (3 minutes)

Say

"In thirty minutes you have seen one job go all the way through: a client's request priced from the contract, a truck protected from double booking, customs cleared with every document on record, the cargo delivered, the dollars collected, the profit of the trip calculated, and the books written, all in one system, each person seeing only their own part."

Say

"What we are asking for today is [your ask: approval to go live / budget for training and hosting / a pilot with two trucks for one month]. The next phase adds GPS tracking and distance, so we can report cost per kilometre and litres per 100 km."

The ask

Decide your **ask** before the meeting and say it clearly, once. A demo without an ask becomes *"very nice, thank you"*. Typical asks are approval to go live, a pilot period, the hosting and training budget, or nominating one owner per department.

B5 · The five messages to repeat

If the audience remembers only five things, make it these. Come back to them in every act.

#	Message	Proved in
1	**One system, typed once.** Fleet, jobs, warehouse, money and books are connected.	Acts 2, 3, 6, 7
2	**It refuses expensive mistakes.** Double booking, overload, expired licences, missing customs papers.	Acts 3, 4
3	**It does the follow-on work.** One click updates vehicle, driver, cargo, request, ledger and notifications.	Acts 5, 6
4	**We know the profit of every trip**, in any currency, net of VAT.	Act 6
5	**Control and trust.** Role-based access, approvals with names, full audit trail, nothing silently deleted.	Acts 6, 9

PART B · THE PRESENTATION

B6 · Questions stakeholders ask

Answer honestly. Saying *"not yet, it's in the next phase"* builds more trust than over-promising.

Question	Answer
Is our data safe?	Each person signs in with their own account. Accounts lock after repeated wrong passwords, forms are protected against forged requests, files are only served to signed-in users with the right role, and every action is in the audit trail. Back up the database regularly from the hosting panel.
Who can see prices and money?	Only the roles you allow. Drivers see only their own trips; the Logistics Manager can read rate cards but only Finance can change them. The administrator changes this per role in Role permissions.
Can it track trucks on a map (GPS)?	Not yet. It is the planned next phase. Odometer readings and planned and actual times are already recorded, so distance, cost per km and litres per 100 km can be added.
Does it work on a phone?	It is a web system that opens in any browser, including on phones. There is also an API a driver's phone app can use to see the day's trips and close deliveries.
Does it handle dollars and shillings?	Yes. Each record keeps the real currency (RWF, USD, KES, TZS, UGX) and converts it at the rate in force on that day. Reports and the books use the RWF amount.
Does it replace our accountant?	No. It removes the retyping. Operational documents post themselves in double entry; the accountant reviews, adds manual entries (such as depreciation) and closes periods.
Can it do our tax (VAT, RRA EBM)?	VAT is calculated on invoices and posted to VAT payable. Direct connection to the RRA EBM system is not built. Treat it as a future integration.
What if someone makes a mistake?	Records can be edited; deleting needs a reason and keeps history; journal entries are corrected by reversal. Nothing disappears without a trace.
Does it send emails?	Yes, when email is configured: password resets, new accounts, alerts about expiring documents, low stock and overdue invoices. The outbox shows everything sent. (On the live server email is currently switched off.)
How long to train staff?	Each role sees a short menu of only their own pages. Most staff can learn their part in one session using Part C of this guide.
What does it cost to run?	Web hosting (cPanel), a domain and email service. No per-user licence fee. [Confirm the figures before the meeting.]
Can we bring in our existing data?	Yes. Customers, vehicles, drivers, suppliers and stock can be entered on screen or imported in bulk into the database.

B7 · If something goes wrong

Problem	What to do
A red message appears	Read it out. It is usually a rule doing its job (*"this is the system protecting us"*). Fix the cause and click again.
A button you expected is missing	It is a permission, not a bug. Switch to the right role, or show it from Super Admin.

Problem	What to do
A database error page	Most likely pre_demo_update.sql was not imported. Move on to the next act and show that part from your screenshots.
Internet drops	Switch to the phone hotspot. If that fails, present from the screenshot folder and keep the story going.
You forget where a page is	Press **/** on the keyboard and type a few letters. The quick search jumps to any page.
Running out of time	Skip Acts 8 and 9. Always keep Act 4 (customs) and Act 6 (getting paid), then close.

PART C · USER GUIDE

C1 · Signing in and finding your way

- **Sign in** at the system address with your email and password. After too many wrong attempts the account locks for a few minutes and unlocks itself.
- **First sign-in:** a new account gets a one-time password and must choose its own password before anything else opens.
- **Forgot password:** on the sign-in page, click *Forgot password*. A single-use link valid for one hour is emailed to you.
- **Your profile:** avatar menu (top right) → *My profile* to change your name, phone and photo, and *Change password*.
- **Sidebar:** the menu groups (Fleet management, Transport, Commercial, Finance, Warehouse, Accounting, Reports, Administration) show only the pages your role may open.
- **Quick search:** press **/** anywhere and type a few letters to jump to any page you are allowed to open.
- **Notifications:** the bell shows updates raised by events (approvals, dispatches, payments, alerts). Mark one or all as read.
- **Dark mode:** the moon or sun icon at the top right switches the theme.
- **Role switcher:** administrators only; it shows the system as another role sees it.

C2 · How every page works

Every module is built the same way, so once you know one page you know them all.

Element	What it does
List page	Search box, status and other filters, sortable columns (click a heading), page size, and **Export CSV**, which exports only the rows you filtered.
Add / create button	Opens a form split into titled sections. Required fields are marked; units (kg, km, m³, RWF) are shown on the field.
Automatic references	Leave the reference blank and the system numbers it: CUS-2026-0001, TRP-2026-0001, INV-2026-0001 and so on.
Record page	Status badge, a strip of the key figures, the fields in sections, attachments, line editors, related records and a history timeline.
Line editors	Trip stops, invoice lines, purchase lines and maintenance parts are added on the **record page** after the record exists, not on the edit form.
Workflow buttons	Actions such as *Dispatch trip*, *Approve expense* or *Issue invoice* move a record to its next status. Rejecting or cancelling always asks for a reason.
Calculated fields	Totals, VAT, balances, statuses from expiry dates and stock levels are greyed out and marked *calculated*. You can't type them.
Delete	Asks for a reason, removes the record from lists, and keeps it in the audit trail (a soft delete).

PART C · USER GUIDE

C3 · Fleet management

Used mainly by the Fleet Manager.

Page	What it is for	Key points and automatic behaviour
Vehicles	Register each truck: plate, type, make and model, payload (kg), volume (m³), fuel, cooling unit, ownership, assigned driver, odometer, next service.	Plate must be unique. Status (Available / On trip / Maintenance / Inactive) changes by itself when a trip is dispatched or a work order starts. Fuel entries move the odometer. The record page shows compliance documents, trips and costs.
Drivers	Driver profile: national ID, licence number, class and expiry, phone, emergency contact, hire date, **linked login account**.	Licence number unique. Linking a login lets the driver sign in and see only their own work. Expired licences block dispatch; the dashboard warns within the alert window (90 days).
Maintenance	Work orders: service, type (preventive, corrective, inspection, tyre, bodywork, emergency), provider, priority, estimate, due date.	Add **parts and labour** lines on the record page. **Approve cost** completes the order, sets the actual cost from the lines, returns the vehicle to service and posts the cost to the ledger. **Cancel order** needs a reason.
Vehicle documents	Insurance, inspection, registration, road licence, permits: number, issuer, dates, cost, scanned file.	Status is calculated from the expiry date: Valid, **Expiring** (inside the 30-day window) or **Expired**. The list shows a countdown badge. Alerts go to the fleet team.

C4 · Transport and customs

Used by the Logistics Manager; drivers see their own trips and deliveries.

Page	What it is for	Key points and automatic behaviour
Transport requests	A customer's request for transport: customer and contact, pickup and destination (or warehouses), cargo, weight, packages, required date, priority, rate card.	**Quote the customer** prices it from the rate card (per kg, per trip, and so on). **Customer accepted** approves it and records who and when. **Reject** needs a reason. It becomes *Assigned* when a trip is created for it.
Trips	The job: request, customer, type, vehicle, driver, pickup, destination, planned and actual times, cargo summary.	**Dispatch trip** checks every safety rule (see C12), then sets vehicle and driver *On trip*, puts cargo and deliveries in transit, stamps times and notifies the driver. **Mark delivered** releases them and reports on-time performance. **Cancel trip** releases them and needs a reason. Add **stops** on the record page.
Shipments	The cargo: consignee, origin and destination, cargo type (general, cold chain, fragile, hazardous, bulk, liquid, perishable), packages, weight, volume, temperature range, declared value, quote.	Cold-chain cargo must have a temperature range. It can be issued from warehouse stock. Status follows the trip: booked → in transit → delivered.
Shipment documents and pre-dispatch checks	The document pack a cross-border shipment must carry, and the final *ready* check before it leaves.	Once a pack is started for a shipment, the trip cannot be dispatched until every required document is valid and the check is *ready*.

Page	What it is for	Key points and automatic behaviour
Deliveries	Each drop: recipient, address, planned time, attempt number, proof of delivery, signature.	**Dropped at warehouse**, **Collected / delivered** or **Record failure** (nine coded reasons, reason required). Proof files open only for signed-in users.
Customs clearance	A border crossing for a shipment: border post, direction (export, import, transit), clearing agent, declaration, bond and seal numbers, weighbridge, charges, documents.	Step-by-step status: Collect documents → Submit declaration → Start review → (Request inspection → Inspection passed) or Assess duties → Request payment → Mark cleared → Mark released. It will not clear with invalid documents or unpaid charges, and will not release without a release record. Charges convert to RWF.
Clearance documents, Inspections, Clearance payments, Releases	The supporting records of a clearance, added from the clearance page.	Each is linked to its crossing and appears on the clearance record page.
Border posts	The list of crossings used (Gatuna, Rusumo, Kagitumba, Rusizi, La Corniche, Nemba, Namanga, Malaba, Busia, Holili).	Typical crossing hours are used for planning.

PART C · USER GUIDE

C5 · Commercial

Used by Finance and the Logistics Manager.

Page	What it is for	Key points and automatic behaviour
Customers	Client file: type, TIN, contact, district, payment terms, credit limit, billing currency, status.	The record page lists the customer's rate cards, invoices and recent trips.
Rate cards	Agreed prices per customer and route: vehicle type, basis (per trip, kg, m³, package, day), amount, currency, minimum charge, full-load price, validity dates.	Used automatically to quote requests. A rate cannot expire before it starts. By default only Finance may create or change prices.
Invoices	Bill to a customer for a trip: dates, VAT rate, currency, lines.	Subtotal, VAT, total, paid and balance are **calculated** from the lines. **Issue invoice** is refused without lines and posts to the ledger. **Cancel invoice** (with reason) removes its ledger entry. Overdue invoices are flagged automatically.
Payments received	Money received against an invoice: amount, currency, method, bank reference, date.	Updates the invoice to *Partially paid* or *Paid* by itself and posts to the bank account in the ledger.

C6 · Finance

Page	What it is for	Key points and automatic behaviour
Fuel management	Every fill-up: vehicle, station, litres, price per litre, currency, full tank, odometer, driver, trip, receipt.	Converts foreign currency at the day's rate. Updates the vehicle odometer and refuses a reading lower than the last one. Posts to Fuel in the ledger. Drivers may record their own fuel.
Logistics expenses	Trip costs: allowances, tolls, permits, parking, loading, repairs, insurance, with receipt.	**Approve expense** or **Reject** (reason required). The approver and time are recorded; only approved expenses post to the ledger and count in trip profitability.

C7 · Warehouse

Used by the Warehouse Manager; Finance approves purchases.

Page	What it is for	Key points and automatic behaviour
Warehouses	Each store: code, location, manager, capacity, cold chain.	The record page shows stock held and **customer cargo in custody** (received, loaded, collected).
Inventory	Stock items: SKU, category, unit, quantity, minimum level, reorder quantity, unit cost, batch, expiry.	Quantity follows the stock ledger. Status becomes *In stock*, **Reorder** or *Out of stock* by itself, and a *Stock below minimum* alert is raised.
Stock movements	Stock in, stock out, transfers, damage, returns, adjustments, with source document.	Keeps a running balance, and refuses any movement that would take stock below zero.

Page	What it is for	Key points and automatic behaviour
Procurement	Purchase requests with lines: supplier, receiving warehouse, items, quantities, prices.	Amount is calculated from the lines. The warehouse raises the request; Finance clicks **Approve request**. **Mark received** posts the lines into stock and into the ledger.
Suppliers	Supplier file: category, contact, TIN, payment terms, rating (1-5).	Also used for clearing agents on customs clearances and as cheque payees.

PART C · USER GUIDE

C8 · Accounting

Used by Finance; Management can read the books.

Page	What it is for	Key points and automatic behaviour
Accounting books	The eight standard reports: chart of accounts, journal, general ledger, trial balance, profit and loss, balance sheet, cash flow statement, account statement.	Choose the period (and currency). Each exports to **PDF** (branded), **Excel** (real numbers), **CSV** and print. **Post outstanding documents** catches up any document not yet in the ledger, and never posts twice.
Journal	All double-entry postings, automatic and manual.	**New entry** for manual postings such as depreciation or accruals: it shows a live balance check and refuses to post unless debits equal credits. **Reverse** corrects an entry by posting its mirror; the original stays.
Chart of accounts	Assets, liabilities, equity, income, cost of sales, expenses, including customs duty, clearing fees and border charges.	Each account shows its recent movements. Account codes are unique.
Cheques and cheque books	Cheque books by bank account and number range; cheques with payee, amount, memo and lines.	**Issue cheque**, **Mark presented**, **Void cheque** (reason required). The next leaf number is tracked automatically.
Budget	Budget per account per year or month.	Compare against actual figures in the books.
Currencies and exchange rates	RWF (base), USD, KES, TZS, UGX; dated rates with source (for example BNR).	Every money record stores the amount, the currency and the rate used on its own date, and never recalculates later.
Payment methods	Bank transfer, mobile money, cash, cheque, card, fuel card, each linked to a ledger account.	Bank details can be printed on invoices.

How operations post to the books automatically

Event	Debit	Credit
Invoice issued	1100 Accounts receivable (total)	4000 Freight revenue (net) + 2100 VAT payable
Payment received	Bank / mobile money / cash (by method)	1100 Accounts receivable
Expense approved	Cost account for the category (allowances, tolls and permits, and so on)	Account it was paid from
Fuel recorded	5000 Fuel	2000 Accounts payable (or the paying account)
Work order completed	6000 Vehicle maintenance and repairs	2000 Accounts payable
Purchase received	1200 Inventory	2000 Accounts payable
Border charges	5500 / 5600 / 5700 customs, clearing and border charges	2000 Accounts payable (agent) or petty cash

PART C · USER GUIDE

C9 · Reports

Reports → pick a report → choose From and To → **Run** → **Export CSV**. An empty period shows a clear *No data in this period* message.

Report	Answers the question
Vehicle utilization	Which trucks are earning their keep? Trips, completions, time on the road, share of all trips.
Fuel consumption	Litres and money per vehicle, number of fill-ups, average price paid.
Delivery performance	Deliveries made, failed and re-attempted per month, and the on-time rate against plan.
Maintenance cost	Estimated against actual repair cost per vehicle, and how far out the estimates were.
Driver performance	Trips, deliveries, failures and on-time rate per driver.
Inventory movement	Stock in, stock out and closing balance per item.
Trip profitability	Revenue net of VAT against fuel plus expenses per trip: the margin and margin %.
Expense summary	Expenses per category, split into approved, pending and rejected.

C10 · Administration

Page	What it is for
Users	Create staff accounts (role, department, job title). The system gives a one-time password and forces a change at first sign-in. Duplicate or invalid emails are refused.
Role permissions	A grid per role: view, create, edit, delete, approve for every page. Super Admin cannot be restricted, so the system can never lock itself out. Changes apply on the next page load.
Company settings	Company name, TIN, contacts, logo, currency, VAT rate, invoice prefix, payment terms, alert windows (licence 90 days, documents 30, service 14), lockout rules, accounting basis, email options.
Reference lists	The drop-down values: vehicle types, licence classes, expense categories, item categories, units, departments, border charges and documents.
Email outbox	Every email the system sends or skips, with a preview, retry and a test email button.
Audit trail	Who did what and when: sign-ins, every record created, changed, approved or deleted (with reason), exports and file downloads. It can be searched, filtered and exported.

PART C · USER GUIDE

C11 · Roles: who sees what

These are the permissions as currently configured. The administrator can change any of them under Role permissions.

C12 · Rules the system enforces

Rule	Where
No dispatch without both a vehicle and a driver	Trips
No dispatch of a vehicle in maintenance or inactive, or a driver who is inactive	Trips
No dispatch of a driver with an expired licence	Trips
No double booking of a vehicle or driver already out on a trip	Trips
No cold-chain cargo on a vehicle without a cooling unit; no load above payload capacity	Trips / Shipments

Rule	Where
No dispatch while a started document pack is incomplete or not *ready*	Trips / Pre-dispatch
Cold-chain cargo needs a temperature range, with maximum ≥ minimum	Shipments
No customs clearance with invalid documents or unpaid charges; no release without a release record	Customs clearance
No invoice issued without lines; totals and VAT are always calculated	Invoices
No stock movement below zero	Stock movements
No odometer reading lower than the previous one	Fuel
No goods received without a receiving warehouse; warehouse cannot approve its own purchase	Procurement
No manual journal entry unless debits equal credits; entries are reversed, never deleted	Journal
Every reject, cancel, void or delete requires a reason, kept in the audit trail	Everywhere
Unique plate, licence number, email, account code and references	Everywhere

PART D · BENEFITS

D1 · Benefits by stakeholder

Tailor the closing to who is in the room. Speak to each person's own gain.

Stakeholder	What they gain
Owners and board	Profit per trip and per client; a live view of the business; trustworthy books for banks, investors and auditors; less dependence on any one person's notebook.
Managing director / management	A dashboard of what needs attention today; eight live reports; on-time performance; every approval with a name; faster, better decisions.
Operations (logistics)	Requests priced from contracts; no double booking; trips, cargo, stops and deliveries in one place; customs status visible from Kigali; fewer phone calls to drivers.
Finance	Invoices and VAT calculated; payments tracked to the franc; multi-currency done correctly; the ledger posts itself; trial balance, P&L; and balance sheet on demand in PDF and Excel; cheques and budget controlled.
Fleet	No lapsed insurance or inspection; services on time; real repair costs per truck; odometer history; expired licences blocked.
Warehouse	Accurate stock with a full movement history; automatic reorder alerts; purchases approved properly; customer cargo custody recorded.
Drivers	A simple view of their own trips and deliveries; record fuel and delivery from the road; clear instructions per shipment.
Clients	Faster, consistent quotes; accurate invoices; proof of delivery; quick answers about where their cargo is.
Auditors and regulators	A complete audit trail, soft deletes, reversals instead of erasures, VAT separated, documents attached to records.

D2 · Before and after

Today, without the system	With LMS
Prices quoted from memory or old messages	Quoted from the client's rate card, automatically
A truck can be promised to two clients	Double booking is refused
Border delays discovered when the truck is stuck	Every document and charge visible, with clearance steps tracked
Fuel and allowance receipts pile up until month end	Recorded on the day, approved, and posted to the right trip
"Did this trip make money?" Nobody knows	Trip profitability report, net of VAT
Accountant retypes everything into the books	The ledger posts itself; the books balance
Insurance or inspection lapses unnoticed	Countdown badges and alerts
Stock runs out without warning	Automatic reorder flag and alert
No record of who approved what	Every approval, rejection and deletion with name, time and reason

D3 · What comes next

- **GPS and distance:** live vehicle position, route distance, cost per kilometre and litres per 100 km. The data model is ready.
- **Email and SMS alerts** switched on for clients and staff, for example delivery confirmations and overdue reminders.
- **Driver mobile app** built on the existing API: today's trips, fuel and proof of delivery from the phone.
- **Integrations:** RRA EBM for invoices, bank statements for reconciliation, mobile money.
- **Customer portal:** clients track their shipments and download invoices themselves.

APPENDIX

The two example companies: every reference number

Use this page during the demo to find records quickly. Type the reference into the search box of the page shown.

Record (page)	Akagera Coffee Exporters (finished)	Virunga Cement Distributors (live)
Customer (Customers)	CUS-2026-0001, Diane Uwase, RWF, limit 25,000,000	CUS-2026-0002, Patrick Nshimiyimana, USD, limit 20,000
Rate card (Rate cards)	RATE-2026-0001: RWF 300 per kg, min 3,000,000	RATE-2026-0002: USD 0.09 per kg, min 800
Request (Transport requests)	REQ-2026-0001: 18,000 kg, high priority, assigned	REQ-2026-0002: 25,000 kg, assigned
Trip (Trips)	TRP-2026-0001: delivered 13 Sep	TRP-2026-0002: in transit since 29 Sep
Vehicle / driver	RAD 482 K (Scania R450) / Samuel Niyonzima	RAE 219 C (Actros 2645) / Claude Bizimana
Stops (on the trip page)	Rusumo One Stop Border Post (checkpoint)	ITEC Rubavu Cross-border Depot (waypoint)
Shipment (Shipments)	SHP-2026-0001: 300 bags coffee, RWF 156.6 M	SHP-2026-0002: 500 bags cement, USD 5,750
Delivery (Deliveries)	DEL-2026-0001: delivered to Bahari Freight Agents	DEL-2026-0002: in transit to Goma depot
Customs (Customs clearance)	BDR-2026-0001: Rusumo, released	BDR-2026-0002: La Corniche, declaration submitted
Border charge / document	Clearing agent fee RWF 150,000; customs declaration (valid)	Escort fee USD 120; commercial invoice (pending)
Fuel (Fuel management)	FUE-2026-0001: 400 L at TZS 2,950 = RWF 633,660	FUE-2026-0002: 300 L at RWF 1,560 = RWF 468,000
Expense (Logistics expenses)	EXP-2026-0001: allowance RWF 180,000, approved	EXP-2026-0002: DRC permit USD 60, pending
Invoice (Invoices)	INV-2026-0001: RWF 6,372,000, paid	INV-2026-0002: USD 2,655, USD 1,000 paid
Payment (Payments received)	PAY-2026-0001: RWF 6,372,000 bank transfer	PAY-2026-0002: USD 1,000 advance
Journal (Journal)	JRN-2026-0001 (invoice), JRN-2026-0002 (payment)	Posted when you record items live

Shared records	Reference and detail
Warehouses	WH-2026-0001 ITEC Kigali Main Warehouse (Masaka); WH-2026-0002 ITEC Rubavu Cross-border Depot
Cargo custody	CGO-2026-0001 coffee received 9 Sep; CGO-2026-0002 coffee loaded on RAD 482 K 10 Sep

Shared records	Reference and detail
Suppliers	SUP-2026-0001 Kigali Truck Parts & Service Ltd; SUP-2026-0002 Great Lakes Clearing & Forwarding Ltd
Maintenance	MNT-2026-0001 full service RAD 482 K, RWF 1,245,000, completed; MNT-2026-0002 front tyres RAE 219 C, scheduled 3 Oct
Vehicle documents	DOC-2026-0001 SONARWA insurance, valid to Jan 2027; DOC-2026-0002 inspection, **expiring 20 Oct 2026**
Inventory	SKU-2026-0001 engine oil, 16 drums (in stock); SKU-2026-0002 tarpaulins, 3 (**reorder**)
Stock movements	MOV-2026-0001 oil received (PR-2026-0001); MOV-2026-0002 tarpaulin opening balance
Procurement	PR-2026-0001 engine oil, received; PR-2026-0002 tarpaulins, approved
Cheques	CHQ-2026-0001 cheque no. 100026, RWF 1,245,000, presented; CHQ-2026-0002 no. 100027, RWF 150,000, issued
Budget	2026 freight revenue target RWF 180,000,000; fuel budget RWF 36,000,000
Exchange rates	USD 1,450 and TZS 0.537 from 1 Sep 2026 (BNR)

Glossary

Term	Meaning
Rate card	The price agreed with a customer for a route.
Transport request	A customer's request to move cargo, before it becomes a trip.
Trip	One journey of one vehicle with one driver, possibly carrying several shipments.
Shipment	A consignment of cargo booked for a customer.
Delivery	The hand-over of a shipment to its recipient, with proof.
Customs clearance / crossing	Getting a shipment legally across a border: declaration, documents, duties, release.
Consignee	The person or company receiving the cargo.
T1 transit bond	Customs guarantee for goods in transit through a country.
Soft delete	Hidden from lists but kept in the database and the audit trail.
Double entry	Every posting has equal debits and credits, so the books always balance.
Trial balance	List of all account balances; debits must equal credits.
Base currency	RWF, the currency the books are kept in.
